

YOUR SOURCE FOR **PREPURCHASE EVALUATIONS**

Your Source For Prepurchase Evaluations

At Summit Aviation, we understand how critical a Prepurchase Evaluation is to a new buyer or broker. We know because we have years of experience conducting these types of evaluations at our facility in Middletown, Delaware. Our process consists of three major elements: The aircraft visual evaluation, the aircraft maintenance records audit and reporting the results of these two items.

During the aircraft's time with us, our seasoned team of technicians is prepared to:

- Review aircraft logbooks to determine the aircraft inspection, Air Worthiness (AD) and Service Bulletin (SB) status.
- Evaluate the aircraft – visual evaluation of the fuselage, engines, propellers/rotors to determine overall condition.
- Provide a complete list of noted discrepancies or airworthiness concerns.
- Estimate pricing for repairs, and fix identified problems.

Items that will be in your aircraft report will be, but not limited to, the following:

- Principal Aircraft Data
- Principal Engine Data
- Principal Radio and Avionics Equipment
- Aircraft Interior Specification
- Aircraft Mission Configuration/Information
- Notable Modifications
- Aircraft Physical Condition Key Findings
- Photographs of Observations/Damage

After the reports have been presented and reviewed by the buyer and seller, an approved plan of action will be established to return the aircraft to service.
